The Fenn School Overview

New Meeting Hall & Performance Hall
New Library & Science Center
Concord, MA

Imai Keller Moore has designed a new 16,000sf Meeting & Performance Hall and a new 19,000sf Library & Science Center for the Fenn School, a school for 300 boys from grades four to nine in Concord, Massachusetts.

The school is at the edge of the historic center of town and has a clearly recognizable architectural scale and vocabulary. The scope of these projects and limitations on the available land make substantial change to the existing building pattern inevitable, IKM has therefore developed a new planning model for the school informed by archetypes of New England planning and building, such as the town green and the traditional meeting house with belltower, while incorporating elements unique to Fenn, such as the Senior Seats which ring the Meeting Hall.

The Library & Science Center project allows Fenn to accomplish two of its long range planning goals; the creation of a new library equipped for 21st century learning and the development of a middle and upper school science center in one building.
